Safety Guidelines and Rules

Unit Operations Laboratory CHE 381 & CHE 382

Chemical Engineering Department University of Illinois Chicago

1. You must always wear standard safety glasses or goggles in the lab.
2. Facemasks are required in the laboratory at all times (COVID University rule)
3. Neither food nor drink is allowed in the laboratory.
4. Adequate leg protection is required (no shorts).
5. Full foot protection is required (no open-toed shoes).
6. Secure long hair and loose jewelry. Long unrestrained items can become entangled in moving equipment, resulting in injury and equipment damage.
7. Lab coats are optional but are available when performing experiments.
8. Hearing protection (earplugs) are available if needed.
9. Exercise caution when using ladders and stepstools in the lab to prevent falls.
10. Use disposable nitrile gloves for general lab work; use chemical resistant gloves when handling hazardous chemicals, use heat-resistant gloves for hot surfaces, use sharp-resistant gloves for broken glass or sharp objects.
11. Use the fume hoods when handling chemicals.
12. Know where the acid, caustic and flammable cabinets are in the lab.
13. Know where the eyewash stations and emergency shower are in the lab.
14. In the event of a fire or other accident, contact the instructor or TA immediately. Please review the location of the nearest fire extinguishers. Know how to call emergency services.
15. Pipetting rules: use rubber pipette suction bulbs for pipetting chemicals.
16. Make sure electrical devices are plugged in correctly and well-grounded and inspect for frayed wires or wet conditions before using. When in doubt, ask the instructor or TA for help.
17. First-aid kits are available for minor cuts and minor burns. More serious injuries should be treated immediately at the student health center.
18. Unauthorized experiments are not allowed. Never work in the laboratory alone. No experimental work allowed outside of the lab period unless authorized by the instructor.
19. When in doubt about performing an experimental procedure, ask the instructor or TA for help.

I have read the safety rules and guidelines and I will observe them throughout my laboratory program in Chemical Engineering.

16. Make sure electrical devices are plugged in correctly and well-grounded and inspect for frayed wires or wet conditions before using. When in doubt, ask the instructor or TA for help.
17. First-aid kits are available for minor cuts and minor burns. More serious injuries should be treated immediately at the student health center.
18. Unauthorized experiments are not allowed. Never work in the laboratory alone. No experimental work allowed outside of the lab period unless authorized by the instructor.
19. When in doubt about performing an experimental procedure, ask the instructor or TA for help.

I have read the safety rules and guidelines and I will observe them throughout my laboratory program in Chemical Engineering.

Safety Guidelines and Rules

Unit Operations Laboratory CHE 381 & CHE 382

Chemical Engineering Department University of Illinois Chicago

1. You must always wear standard safety glasses or goggles in the lab.
2. Facemasks are required in the laboratory at all times (COVID University rule)
3. Neither food nor drink is allowed in the laboratory.
4. Adequate leg protection is required (no shorts).
5. Full foot protection is required (no open-toed shoes).
6. Secure long hair and loose jewelry. Long unrestrained items can become entangled in moving equipment, resulting in injury and equipment damage.
7. Lab coats are optional but are available when performing experiments.
8. Hearing protection (earplugs) are available if needed.
9. Exercise caution when using ladders and stepstools in the lab to prevent falls.
10. Use disposable nitrile gloves for general lab work; use chemical resistant gloves when handling hazardous chemicals, use heat-resistant gloves for hot surfaces, use sharp-resistant gloves for broken glass or sharp objects.
11. Use the fume hoods when handling chemicals.
12. Know where the acid, caustic and flammable cabinets are in the lab.
13. Know where the eyewash stations and emergency shower are in the lab.
14. In the event of a fire or other accident, contact the instructor or TA immediately. Please review the location of the nearest fire extinguishers. Know how to call emergency services.
15. Pipetting rules: use rubber pipette suction bulbs for pipetting chemicals.
16. Make sure electrical devices are plugged in correctly and well-grounded and inspect for frayed wires or wet conditions before using. When in doubt, ask the instructor or TA for help.
17. First-aid kits are available for minor cuts and minor burns. More serious injuries should be treated immediately at the student health center.
18. Unauthorized experiments are not allowed. Never work in the laboratory alone. No experimental work allowed outside of the lab period unless authorized by the instructor.
19. When in doubt about performing an experimental procedure, ask the instructor or TA for help.

I have read the safety rules and guidelines and I will observe them throughout my laboratory program in Chemical Engineering.
