Continuous improvement – Safety and Ethics Examples

Ethics Questions from the Senior Written Examination- Fall 2025

Professional ethics and ethical ramifications of technology.
Can you name a recent news item or significant piece of legislation that impacts on technology or engineering, and comment on its ethical ramifications?

Lack of AI regulation, This worries me as the lack of AI controls or limits can lead to AI attempting to replace key safety measurements in order to save on money. And The defunding of the USCSB can lead to more fatal accidents.

Have you experienced an ethical dilemma in your educational or work (e.g., co-op) experience?

Not in chem e or UIC but in a previous internship I had to decide on if it was appropriate to reclassify a shopping zone in Lincoln Square. The issue was if Rezoning from B1 to B2 was worth the gain since B2 allows for alcohol consumption in restaurants but allows for things that are considered immoral "! I am not joking when I say this is in Chicago Zonung code." Like tattoo parlors. Since a school and a elderly center are next to the zone, We decided on finally adding it after almost 100 years of litigation against a old prohibition era code.

How would you approach an ethical dilemma? Where or to whom would you turn for guidance? Can ethical problems be approached in terms of a systematic methodology, or are you guided more by gut reaction, personal experience, upbringing, etc.?

I relied on my Mentors experience and working with community through meets and organizing with those in favor and against by finding a middle ground to rezone the area.
This taught me to solve ethical dilemmas you need both Experience and systematic methodology to solve complicated ethical dilemmas.

Are you familiar with the AIChE Code of Ethics? Can you name specific provisions in it?

Yes. The one that stuck the most with me is "Accept responsibility for their actions, seek and heed critical review of their work and offer objective criticism of the work of others. "

Which courses at UIC have contributed most to your views on professional ethics? How?

321 Reaction Engineering, 381 Unit Ops Lab, 499 Senior Seminar and 396 Senior Design. All have brought up safety as key focus that I would like to have more time to explore in.
These classes taught me how the ethical concern of being engineer in safety for the environment is important as a lot of climate change is done from Chemical Engineering but is being Fixed by Green Chemical Engineering.
