

(1.) Greetings! Please fill out the short questionnaire below about our Program Educational Objectives (PEOs). We are interested in your input to help us review the PEO's and ensure that they remain consistent with our student's needs, the UIC mission and the ABET criteria (accreditation). In formulating your response, reflect on your own experiences in relation to the qualities of (1) depth, (2) breadth, (3) professionalism, (4) life-long learning that constitute the Program Educational Objectives of the Chemical Engineering program.

(1 = Weak, 2 = Moderate, 3 = Strong, 4 = Excellent)

- 3.31 Depth: In engineering practice, advanced study or original research, UIC Chemical Engineering bachelor's degree graduates will be effective in applying fundamental principles, scientific knowledge, rigorous analysis, creative design, and conceptual innovation.
- 3.24 Breadth: Based upon mastery of engineering in a broad, societal context, UIC Chemical Engineering graduates will have successful careers in the public or private sectors, or in the pursuit of graduate education.
- 3.31 Professionalism and Service: In the service of industry, government, the engineering profession and society at large, graduates will function effectively in the complex modern work environment with clear communication, responsible teamwork, and high standards of ethics, professionalism, safety and protection of the environment.
- 3.25 Life-Long Learning and Leadership: Based upon a rigorous undergraduate program that is innovative, challenging, open and supportive, graduates will enhance their skills and knowledge through life-long learning and demonstrate professional leadership.
- 3.00 Overall, do you feel that your undergraduate degree prepared you for your career?

(2.) Additional comments: Please reflect on your own experiences in relation to the qualities of (1) depth, (2) breadth, (3) professionalism, (4) life-long learning that constitute our Program Educational Objectives.

The course was run in a professional manner and I enjoyed applying theory to hands on labs.

I really like the school (especially the chemE department) and really that this school helped me achieve my goal to become a chemical engineer.

I think depth was pretty weak, as I do not know why we apply some equations but I was told to do so. For breadth, I think every professor tried their best to call for guest speaks to enlighten our career pathways. For professionalism, it was quite pleasing to see how professors have dealt during this pandemic. Lastly for life-long learning, I have learned how to think as a chemical engineer, and how to approach each problem differently.

No Comment

no.

I believe that in the program a lot of professors went in depth with what they taught and what they did. Professionalism was for the most part a part of the program. There were many instances where professors (multiple) failed to acknowledge/respond to emails and when I spoke to them they saw the email but did not want to respond. But overall i would say that the program has met all four educational objectives.

Some courses need to be re-evaluated including 311, 312, 321, and 341. These courses have very little student engagement. Overall, I feel UIC prepared me well for my career, however, I wished I had gotten more hands-on experience as I did with the lab periods.

I do feel that in terms of depth there is a lot that we learned that is beneficial and equips us for our future and the same goes for breadth as well. In terms of Professionalism and Service and life-long learning and leadership, the department does promote these aspects a lot which is wonderful. However, I do hope the department can expand

more on Lean understandings and grow on it more for the coursework as I feel it can provide a lot of use for students in their careers in the future. I do feel though that because the degree is so rigorous, the aspect of mental health and giving students an opportunity to understand that taking time for oneself if things are getting too rough is fine. Even there are a lot of pros and I'm grateful, it does burn you out as well. It would be beneficial to have a version of the 499 Professional Development course available to sophomores and juniors as well.

over the 4 years, the experience mainly relied on the professor who taught the course. the depth of the course were adequate. the professionalism varied depending on the professor. there were some professors who were childish on the way they handled certain malfunctions during the course. other professors taught actual life lessons that are valid in the real life job scenario and also helped strengthen the confidence in the students and in their work.

I think chemical engineering is a very broad degree that there needs to be concentrations within. Yes, this can be accomplished in furthering our education through a masters or doctorate degree, but the work force is very demanding in undergraduates having a specialization coming out of college. This can't be accomplished in one summer through an internship, because there lies the factor that you might not have enjoyed what you "thought" was your passion. Then there is the factor that some students don't even have internships coming out of college. Thankfully I have two internships experiences before I graduate, but even then I haven't been hired...

(1) I feel that fundamental principles and rigorous analysis stand out for me. Each course re-emphasized these two topics throughout the semester and are engrained in how I think. If I am able to understand the fundamental principles and perform a rigorous analysis to address any of my questions, I should be able come up with a viable solution. (2) I do believe that most students will find a job and develop a career they enjoy. Given the several sectors of the chemical engineering field, there should be something for someone who graduated. (3) The senior courses were a great blend of hard and soft skill development. With Unit Ops and Senior Design, being able to collectively work through an assignment/project became common. In the workforce, I should be able to apply these skills easily. (4) I can see myself keeping up with the chemical engineering field. As companies move forward, I'm sure I will have to adapt to new technology and more efficient methods. (5) I think the CHE courses were great in terms of instructors and content. It would be helpful if a version of the CHE499 course could be implemented for freshman/sophomores (although I feel like the ACCESS addresses this) to show how content from class is applicable to industry. It will be easier to work on for the skills/knowledge required in most jobs.

All the courses were really helpful and they built up off each other. It is very important to at least have some understanding of transport phenomenon's which I didn't really achieve. On top of that, the courses that I thought were too much work were 301 and 341. We were given too much work for what we had learned in class. Most of the time, if a group couldn't make it to the office hours, they wouldn't be able to finish the hw because there was information hidden from the hw. On top of that, 341 for this semester was asynchronous but we were made to attend class and the professor took attendance everyday. We had quizzes on class time too. However, I learned a lot in all of the classes.

UIC has definitely challenged me and pushed me to learn fundamental principles of being a chemical engineer. I also feel that the curriculum and group work was very good to learn communication and people skills throughout the years.

1 & 2) I felt like i learned a lot of topics throughout my ChemE degree. It was a variety of depths of materials. 3) I definitely found better ways to speak to my professors as well as appropriate methods to communicate.

I think UIC does a good job at establishing a good base in chemical engineering. There is a little too much emphasis placed on research and not enough on getting real world experience.

Since my first semester at UIC, the Chemical Engineering Department has helped sculpt me into a knowledgeable individual while developing my leadership qualities and confidence as a young engineer.

I wish the Chemical Engineering Department would introduce me in more depth to the role of Chemical Engineer in the real life industry.

(1) The Senior Design course as well as the other senior classes were beneficial in reviewing and remembering these fundamentals learned earlier in the degree. (2) We also have some electives where we had to look beyond just engineering context but also keep the social aspect in mind for me I did the renewable energy class. (3) Most professors and classes expected us to submit all our projects and presentation on Time this shows that we are going to professional enough to do our work on time. we even had to interact with mentors in senior design and that gave us the perspective of group work and how we might be questioned on our work. (4) Again, senior design, as well as lab classes, helped us understand group work and made us leaders of our own teams in a way.

It was definitely a tough and challenging 4 years.

There are opportunities, available but you need to seek it out.

Feel prepared in all of the qualities, depth, breadth, professionalism, and life-long learning.

I feel like I barely know anything. I just want money :(

I think there are a number of students that were not properly prepared for senior-level work. Those students made this year more stressful with their lack of knowledge, initiative, and group working capabilities. Overall the university did a disservice to those students by allowing them to take part in these classes.

5) Dr. C makes everyone feel inadequate. 4) I wish there was an undergraduate program that was open and supportive. However, it seems professors are focused on their research and there is not an emphasis on teaching the younger generation. I hope that there is an incentive to teach rather than research. I do not believe I have the skills to be an engineer.

Most ChemE courses assume the career path for a ChemE student is industry. However, ChemE is very broad and students may find jobs in any environment, especially during a recession when jobs may be scarce.

Due to the last year and a half of undergrad classes being virtual, I am not sure if I feel completely ready to start a career. The education was personally not 100% effective for me and I feel that I have missed out on necessary experiences toward becoming a real engineer.

I learned a lot from my chemical engineering courses at UIC. I believe they prepared me very well for my career. However, the pandemic did cause me to become less engaged in my classes, and I could not get the most out of my last year at UIC.

(1) I have already used engineering thinking into fixing problems at work. Getting to the bottom of a problem and rigorously analyzing how to fix it. (2) I think UIC has prepared me to find a job that can benefit society. (3) COVID-19 impacted my performance with my peers. I think UIC did its best but overall I think face-to-face communication resolves problems much, much better than online interactions. (4) There is always something new to learn, no matter how good you learned things while in college.

Everything was great

I think UIC has been a wonderful institution in providing a comprehensive overview of chemical engineering. In terms of depth, the required courses covered each of the categories covered in the description - CHE301 and CHE341 provided a very deep understanding on how to rigorously analyze systems and processes, CHE396 and CHE397 pushed us to innovate and create solutions by developing a novel process, and the 200 level classes of mass balances and thermodynamics instilled fundamental chemical engineering principles. I truly felt challenged by these classes, and have felt myself grow so much as both a student and engineer. The Senior Design and

Professional Development class especially introduced us to multiple career options within industry, and UIC's research focus allowed me to partake in multiple projects to help strengthen my skills for graduate skills. The Professional Development Seminar, as well as lessons incorporated into classes by teachers, taught professionalism and how to act correctly. Finally, by senior year, many of the classes switched to a heavy emphasis on self-learning and self-teaching. This helped instill a deep love for the ways that helped me best self-learn, and the CHE382 and CHE397 classes built skills of leadership by requiring us all to lead our groups in various assignments.

I think the overall CHE program was good. I learned a lot and some courses were challenging and ensured that I learn the materials well.

Implementing more ways to get undergrads to get internships/jobs would be great help. It seems there isn't much from the department that grows that area. It would certainly help to have internship experience and apply some of what has been learned in the classroom. More opportunities for professional growth would be beneficial for the students and growing the department.

To be concise, the amount of knowledge about engineering through my degree is absolutely helpful and impactful for my future endeavors, however as of right now, I feel the effect to be miniscule until some time has passed into a career in my field.

Regarding (1) depth, (2) breadth, (3) professionalism, (4) life-long learning PEOs all were met. There is room for improvement in the program on encouraging creative design and critical thinking. Too many courses are just by the book for an engineering degree.

I thoroughly enjoyed every aspect of my undergraduate program. Some cross-discipline interactions with other engineers would be nice.

I thoroughly enjoyed every aspect of my undergraduate program. Some cross-discipline interactions with other engineers would be nice.

1. Depth: I think there were so many concepts that I've learned throughout my undergraduate degree that I do feel like it prepared me for any sort of application of these topics. 2. Breadth: From the peers, I've spoken to that have already graduated and from the CHE 499 course, I do believe that this was worth my time for this sort of education. 3. Professionalism and Service: I think pre-covid would have helped shape me to choose excellent as a choice, but when it comes to presentations virtually vs. in person, there is no comparison that in person would have prepared me to be more comfortable around industry people/mentors. 4. Life-Long Learning and Leadership: I think the best year for this was senior year when we had to work in groups, learn to deal with people, and understand the bigger picture in all of the assignments and tell people what to do/coordinate meetings.

none.

I like the skills learned but wished there was more computing involved

Classes almost always had the goal of preparing us for our careers after university. I am completely satisfied with my experience.

Excellent course with great materials

I think there could be some more emphasis on ethics. Besides some of the modules from AIChE we never really talked about it.

Depth- Most professors presented the material in a way to effectively apply fundamental knowledge about

important topics in Chemical Engineering. However, in my experience, some material was presented better than other topics. *Breadth-* I feel that graduates from UIC Chemical Engineering Department will have successful careers upon graduation. However, their success may be limited depending on the type of industry the person enters. *Professionalism-* I believe that graduates will enter their respective work environment with good communication, professionalism and ethics. However, I'm not too sure how a department can control something like this. *Life-Long Learning and Leadership-* I feel graduates will have to enhance their skills and still require further studying to become effective at their careers and in leadership.

(1) The professors at UIC definitely prepare their students to be effective in depth. They make sure you know the fundamentals and theory behind everything and they train you to think like an engineer. (2) In terms of breadth, I believe the Chemical engineering program achieves its objective. The professors all have incredible knowledge of engineering and try to prepare their students for successful careers as much as they can. (3) The program effectively teaches good professionalism and service. (4) The program effectively instills life-long learning and leadership into the students.

1. The courses I took at UIC varied in depth, but each teacher always went beyond the textbook in teaching the material. 2. The breadth of the material was appropriate, as all facets of the engineering profession, ethics, safety, theory, economics etc. were touched upon throughout the courses. 3. High expectations from the professors ensure that graduates will have an exceptional sense of professionalism. 4. My education at UIC allowed me to be taught by experienced industry professionals and research, preparing graduates to pursue post-graduate school or a job in industry.

As far as academics and education at UIC, my experiences were good. As far as professionalism among my peers, especially during the senior year, my experiences were not good. My life-long lesson from my senior classes is that not everyone can handle working in groups without their bad character coming out.

Overall, I do feel I can learn or adapt to new concepts that may appear later in my career, But I do feel I need a bit more practice to still master the current concepts I've learned at UIC.

N/A

I do believe that UIC graduates in this engineering program will benefit the industry and field because of the high standards that were placed from the program.

All the professors made sure the theory is understood and applied in the homework or labs, allowing for practicality also. Many of the professors taught us that professionalism will take us a long way, so always be on time.

The program is fantastic.

I think the program is very rigorous and helps us gain a good understanding of engineering concepts. I would like to see more real world/work environment type problems.

Good experiences

(3.) Did you work part-time while you were a student? If yes, then approximately how many hours per week?

Yes, 24 hours a week

I was a full time while attending school at uic as a ChemE student. My overall working were around +40 hrs/ week.

Yes, I worked around 6 hours per week

Yes, on average throughout my years at UIC maybe 10 hours per week.

Yes. I worked mostly weekends and holidays. During non-holiday periods about 8-16 hours. During holidays I worked 16-30 hours.

no

Yes, I was an undergraduate learning assistant within the math department at UIC. I worked 6-8 hours a week.

no.

yes, 30 hours

yes, 20 hours a week.

Yes, I worked about 20-30 hours for some semesters

Yes 30-45

I worked Part-Time before I transferred to UIC, for approximately 20-30 hours per week. However while at UIC I have not worked part-time until my final semester in the last 3 months for about 24 hours per week.

i worked part time for the first 4 years, however i had to quit my job in order to keep up with the amount of work and keep up with the curriculum.

Yes, anywhere between 3-8 hours a week

Yes, about 15 hours

Yes. I consistently worked about 20 hours per week each semester.

Yes, 6 hours per week

Yes, 30 hours a week

No

Yes, I worked 10 hours per week.

I worked part time and full time throughout my UIC experience. ranging from 20-40 hours.

One semester I was working 30 hours a week.

I did work part-time while a was a student, working approximately 12 hours per week. I did have to stop working to keep up with the rigorous workload and to keep up with a specific Professor's additional lectures and office hours on weekends and outside regular course hours/office hours.

Yes, 30 hours a week

Yes, I worked 30 hours per week.

No.

Yes I was working anywhere between 20-30 hours a week while being a fulltime student

No

No

No

yes I worked 10-15 hrs/week

N/A (I used to)

Yes, the number of hours changed from semester to semester. During Covid, I worked around 30 hours a week and did online classes from work.

No, I did not work part-time

40

Yes, I worked part-time during my last year and I just worked about 10 hours per week.

yes, I had 2 part-time jobs. Approx 25 to 30 hrs per week

I worked full-time with a flexible schedule but around 40 hours or more each week.

Yes around 20 hours a week

I worked part-time for 2/3 of my time as a student, for 6-8 hours a week.

yes. around 10-15 hours

Yes, all semesters. 15-20+

Yes, about 20-25 hours a week.

Yes, about 15-20 hours every week.

Did not have the opportunity

Full-time (45 hours)

Full-time (45 hours)

No

I worked part-time for most of my undergrad experience. Some semesters I did not have a job but the hours varied from 10-30 hrs a week.

No

Yes, 10 hours per week.

only freshman through sophomore year: 17 hours

Yes, between 6 and 15 hours.

Yes, 18 hours a week

I did not.

Yes; 15 - 20 hours

Full time 40-50 hrs/week

No

I did not.

No, I did not work part-time.

Yes, worked at an internship for the past 3 years. Approximately 20 hours per week.

I worked part-time for my whole senior year at around 20 hours per week. This was also overnight shift.

No

Yes, approximately 20 hours

For the first year at UIC, yes, about 20 hours/wk.

Yes, 20 hours a week

I worked 6-12 hours per week

10 hr per week

Yes. I actually worked full time before the pandemic. And then just 20-40 hours during the pandemic.

yes, 25

Yes 10 hours per week

(4.) Have you found a job? If so, in which company and industry? Please indicate your job title or specialization.

No

Not Yet!

Not yet.

Still applying for a few jobs. In negotiations with one. I'll see where this goes.

I will be working as a Project Engineer at ProLeiT. The company is in the Process Controls/Automation industry.

The branch of the company that I will be working for deals primarily in the Food & Beverages sector.

no

Yes, I have found a job in the biopharmaceutical industry, known as AbbVie. I will be a part of a rotational program there.

yes, but not related to engineering.

No

Yes, I have an internship and potential job offer.

Yes, FM Global as an Engineering Consultant I

No

I have not found a full-time position as of now, but I began an internship at the end of this semester that will hopefully continue through the summer at a food manufacturing facility called Hearthside Food Solutions, with a specialization in continuous improvement.

i am still in the process of applying for jobs.

No, currently in the process

I have not found a job yet. I will take some time to network and try to plan out my future goals in the meantime.

No I have not found a job but I am trying :(

N/A

No

No, I have not found a job yet.

Not yet, I still have on semester left to finish.

Not yet. Interviewing for project engineer roles.

I have not found a job.

Internship for now - PKN Orlen S.A.

No.

Yes. Found a Job at ProLeit Corp (Process Automation) as Junior Sales Engineer.

No, unfortunately not yet.

Yes, I have found a jog as a technical solutions engineer in EPIC systems.

N/A

No

yes Risk analyst for Marsh & McLennan

No.

Yes, Associate Analytical Chemist at Futureceuticals Inc. Performing quality testing for trace heavy metals in food products by ICP-MS. This mainly consists of dried fruit and vegetable products.

No, I have not found a job

Unfortunately not yet.

I have not started to look for an engineering job yet, I am employed as a production manager at a roofing company.

Not found job yet

Going to graduate school.

no

No

No.

Yes, at the company I interned at since high school. Junior Process Engineer at LanzaTech.

Still looking

Currently a Process Owner at CSL Behring.

Currently a Process Owner at CSL Behring.

I have two upcoming interviews for two different companies. Both interviews are for an entry level engineer position. Both companies are in the petrochemical industry.

I have not found a job but that is because I have not started looking just yet.

No

No I have not.

no

No

Internship as an R&D in Navitas systems for manufacturing lithium ion batteries

Not yet sadly.

Yes; Tetra Pak, Application Engineer

No

No

No, not yet.

I currently have an internship lined up for the summer with Crown Cork and Seal. I will be an engineering intern for their organization.

No, but still have the internship position until finished with school. Title is a General Engineer Assistant.

I have not, I am focusing on taking a break for now and review/improve my material understanding.

Not yet

I have not applied due to myself being admitted to the master's program

No

I have received 1 job offer for a rotational program. I am still interviewing for other opportunities

No, I have yet to find a job in industry

No

Yes. I'll be working as a Process Engineer and Procter and Gamble.

Not yet, but I am attending graduate school.

Yes

(5.) Are you planning to attend a graduate or a professional school? If so please list the name of the school and the specific program (M.S./Ph.D/M.D.) that you will enroll in, or those programs that you have looked into.

No

I am planning to continue my Ms , but I am sure about the degree or school yet.

No, I am not planning.

Nope

No

no

At the moment, I am not enrolled in any graduate or professional schools. In the future, I would like to earn a master's degree, however not in chemical engineering. I would prefer to expand my knowledge in data sciences or public health.

yes, planning to pursue PhD.

I am not sure, i may look into a masters in the future

no

No

*Currently, I do not plan to pursue graduate school at this time, but I hope to pursue an MBA down the line.
depends.*

Yes, I will pursue an M.S. in Chemical Engineering at UIC.

No, too expensive...

Not at the moment. I do see myself returning to UIC for an MBA later on if the opportunity arises.

Yes, PhD in Bioengineering at UIC

N/A

No

Yes, I plan on attending grad school at some point in the next 5 years, but I would like to work in the industry first after graduation.

N/A

No

I do not have plans to attend graduate or professional school.

Yes, PhD in Poland

Yes, I am planning to attend graduate school.

No.

No, I would like to go into industry

No

Graduate school, 4+1 master's program at UIC Chemical Engineering Department

No

no

No.

Not initially. If a company sponsors my degree later on and pays for it I may return to school.

I will be taking part in the 4+1 Master's program at UIC

No.

No

Yes MS program at UIC

I am attending medical school in the fall at the Northwestern University Feinberg School of Medicine, and plan to receive my M.D. in 2025.

No, but if i happen to go into higher education it will be a M.S in Software engineering/data science

Not at the moment. Most likely an MBA at some point.

No.

Not in the near future, possibly return for a M.S. or get a PE license

Not right now

Potentially down the road, but no current plans for graduate school.

Potentially down the road, but no current plans for graduate school.

Yes, I am planning to attend UIC for the Chemical Engineer M.S. program in the next year (2021-2022) or the year after (2022-2023)

I do not plan to attend graduate school.

I am enrolled in the 4+1 program to get a masters in Chemical Engineering

I do not plan to attend graduate school.

yes. M.S.

Yes, M.S. (4+1) at UIC

N/A

I am not planning on going to grad school.

No

Illinois Institute of Technology JD/IP Law

No

I plan on applying for an MBA but I haven't begun looking into different programs just yet. I plan to find a job and save up some money first.

I am not currently planning on attending graduate school.

Yes, planning to attend graduate school to pursue more into the research or laboratory field. Have not decided the specific program at this point.

I do not plan on that.

Haven't decided yet.

Yes, UIC's M.S program for chemical engineering

No

Not at the moment

Phd in pharmaceutical sciences

I want to. Eventually. When i have money.

Yes, UIC 4+1 MS program.

No

(6.) Do you have a strategy in mind for continued professional development and/or continue learning? For example, do you intend to take the FE/PE exam at some point in your career? If so, when?

No

If it is applicable ,I will soon take it.

Yes, I would continue once I reach at some position, and I would need more degree to promote.

Work for other companies for awhile to learn the ropes. Then I want to start/run one or more businesses of my own.

I'm planning on scheduling my FE exam for the end of the summer. After a few years at ProLeiT I'll decide where I want to go in my career and whether or not to take the PE exam.

I wanted to take my FE, but with online classes, it was very difficult to stick to a regime. I really wish the university promoted taking the FE, maybe offering sources, guides, mock study schedules. It is one of my goals to take the FE and continue learning. I would like to take the FE within my first year of working.

no.

Take the PE exam next year

Currently i have no strategy

I do plan to inform myself about the PE exam and complete some certifications after beginning my job.

Yes After some time studying and preparing

After graduation, I plan to study for the FE exam and take it hopefully near the end of the summer and eventually take the PE exam. I have currently not pursued any other examinations as I am most aware currently of FE/PE.

not sure yet

I intend to take the FE exam sometime before I graduate with my master's.

Yes, I will either go into automation or controls engineering therefore I will eventually need a PE license for CAD drawings and schematics.

I do plan on taking the FE exam in the future for the title/content review. The rate would be higher if there was a club or class that prepped ChE students. the FE/PE license also wasn't emphasized much in my opinion. I know that Civil Engineers nearly require it but it was seen as optional for most ChEs.

I intend to take FE exam after I graduate.

Yes, most likely this year

No

I plan on studying for the FE and the PE exam as soon as I can after graduation to retain the technical content I learned at UIC. I also plan on going to grad school after working for about 5years.

I would like to pursue taking the FE/PE exam.

I plan to do an MBA in the future.

I aim to develop skills in programs not covered in the UIC Chemical Engineering curriculum, such as skills in AutoCAD. Additionally, I will continue hone my skills around programming as that may prove essential in the growing job market. I do not have any current plans to take the FE/PE exam at the moment.

Yes, but first I am planning to take one year off to figure out what industry to focused on

Yes I do intend to take the FE/PE exam but after completion of my graduate school.

No strategy as of now. I will decide on that depending on whether or not the job requires me to do these exams or if it is beneficial for my position.

If the future company I work for requires me to get certifications and take the FE/PE exam, I will.

I would like to pursure a possible MBA or CS masters

Possibly take FE/PE exam at some point in my career.

No

not at the moment

I would love to pass both tests. FE exam hopefully by two years and PE exam in 7 years time. I want to pass these exams as I would feel that I am actually deserving to be called an engineer.

Not at the moment. Working on quality testing and research projects are priorities for me currently.

No particular strategy in mind yet, but may take the FE exam if I feel that I need to

No.

I would like to take the PE in the future, I believe learning on the job is something that is indispensable.

Yes I intend to take the FE by the end of the year

I do not plan to take the FE/PE exam, but plan to continue to pursue lifelong learning as a physician by keeping up with the medical literature. Furthermore, I will have required board exams to continue to foster development. I also hope to continue to be involved in research to continue growing as an engineer and apply those fundamentals to innovate in the field of medicine.

not sure.

I most likely will take the PE for environmental at one point. It really depends where I get a job/industry

No strategy yet for my career plans, but a FE/PE exam could definitely help in the future.

Yes, I'd like to take the PE exam, perhaps after 3 years in industry.

Have not looked into that as of right now.

Plan to take the PE within the next 2 years.

Plan to take the PE within the next 2 years.

I am interested to prepare for the PE exam, and I am planning to see for an opening from the beginning of 2022

I'm not quite sure, I have some strategies such as continuing to reinforce fundamental chemical engineering concepts that will help in any job but I do want to get better at excel and VBA so I would practice on my own certain skills that help develop that for my future job. Im not sure about the FE/PE exam because I am not a good exam taker.

I do not currently plan on taking the FE/PE

I do intend on taking the PE exam. Possibly within 6 years.

FE exam fall 2021

No plan

Planning on taking FE exam this fall 2021

I am thinking of taking the PE exam.

Undecided

Have taken FE Exam, will pursue PE license as career progression permits

I plan to take the FE as soon as I graduate and take the PE exam when I can apply for the license. Further studying on specific topics will probably happen during my career to brush up on topics required needed for my job.

I plan to take the FE exam within the next year and hopefully take the PE exam after 5 years of working in industry.

I will pursue a Masters in Business Administration shortly after graduating to further my professional

development.

I have considered the engineering exams. It depends on which direction I decide to go after I finish this bachelor's in Chemical Engineering.

I plan on learning many other concepts that may stem out of chemical engineering, mostly in the coding area. I will mostly be using books and online learning programs.

Haven't decided yet have to figure that out depending on what job opportunities I get.

When I graduate from my M.S program, I do plan on taking the PE exam.

I plan on taking the FE exam this summer, 2021.

I do intend to take both FE and PE. The FE approximately a year post graduation but PE I am unsure of

No

Absolutely. The moment I step into the company, I need to analyze what my path for growth looks like.

Yes, studying for the FE exam this summer and then will take the PE exam as soon as possible.
