

FINAL LAB PRESENTATION
EVALUATION FORM
CHE382 CHEMICAL ENGINEERING LABORATORY

TEAM #: 3 TUES PM LAB EXPERIMENT: Gas Absorption

COMMENTS:

1. Organization

Time management- Just right

2. Presentation Delivery

Good eye contact, voice level good for all speakers

3. Visual Aids

Slides are generally good with good use of space, extra graphics

Apparatus slide- use larger images of components

4. Content

Objective good, Introduction and industry apps good.

Principles/theory: Satisfactory but could expand on the mass transfer theory.

Experimental: Good (flooding, closed loop, open loop figures). Include units on K_a mass transfer coefficient.

Results: Good (Ethanol bottom/top compositions, McCabe Thiele analysis, but include a table of the efficiencies calculated.

Analysis/Discussion: Expand on your results, not just experimental challenges and safety

Conclusions: No slide

Presentation Grade: (100 points max): 88/100
