

**Project Team: Judge Score Assessment- Spring 2026****Scoring Rubrics Mapped to Student Learning Outcomes and Program Educational Objectives**  
**Technical Quality**

| <b>Performance Indicator (PI)</b>                                                                             | <b>SLO</b> | <b>(1) Unsatisfactory</b>                                                                     | <b>(2) Developing</b>                                                                             | <b>(3) Satisfactory</b>                                                                                    |
|---------------------------------------------------------------------------------------------------------------|------------|-----------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------|
| 1. Identification of project objective(s)                                                                     | <b>2</b>   | No design strategy; haphazard approach                                                        | Uses a design strategy with guidance                                                              | Develops a design strategy, decomposition of work into subtasks                                            |
| 2. Evaluation of design alternatives with realistic constraints (economic, environmental, social, ethical)    | <b>2</b>   | No consideration of economics, safety, and environment                                        | Can use prior knowledge to design individual pieces of equipment competently when guided to do so | Understands how areas interrelate and demonstrates ability to integrate prior knowledge into a new problem |
| 3. Consideration of factors influencing the design (cost, manufacturability, sustainability, maintainability) | <b>2</b>   | Cannot design processes or individual pieces of equipment without significant amounts of help | Can follow a previous example competently                                                         | Suggests new approaches and improves on what has been done before                                          |
| 4. Overall fulfillment of project objectives                                                                  | <b>2</b>   | No consideration of economics, safety, and environment                                        | Design is done, but procedures and equations are not documented or referenced                     | Develops a solution that includes economic, safety, environmental and other realistic constraints          |
| 5. Project innovation                                                                                         | <b>2</b>   | Unable to relate prior knowledge to the design problem                                        | Can use prior knowledge to design individual pieces of equipment competently when guided to do so | Understands how areas interrelate and demonstrates ability to integrate prior knowledge into a new problem |
| 6. Project practicality in view of contemporary engineering standards/practice                                | <b>2</b>   | No application of engineering and/or scientific principles                                    | Includes only minor or cursory consideration of economic, safety, and environmental constraints   | Applies engineering and/or scientific principles correctly to design practical processes                   |

## Presentation Quality

| <b>Performance Indicator (PI)</b>                  | <b>SLO</b> | <b>(1) Unsatisfactory</b>                                                                                                                                                                                                | <b>(2) Developing</b>                                                                                                                                                                                                                 | <b>(3) Satisfactory</b>                                                                                                                                                                               |
|----------------------------------------------------|------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 7. General professionalism and oral communication  | <b>3</b>   | Talk is poorly organized, e.g. no clear introduction or summary of talk is presented                                                                                                                                     | Presents key elements of an oral presentation adequately, but "tell them" not clearly applied                                                                                                                                         | Plans and delivers an oral presentation effectively; applies the principle of "(tell them)" -- well organized                                                                                         |
| 8. Knowledge of the background material            | <b>3</b>   | Unable to relate prior knowledge to the design problem                                                                                                                                                                   | Can use prior knowledge to design individual pieces of equipment competently when guided to do so                                                                                                                                     | Understands how areas interrelate and demonstrates ability to integrate prior knowledge into a new problem                                                                                            |
| 9. Organization & quality of presentation material | <b>3</b>   | Organizes materials in a logical sequence to enhance the reader's comprehension                                                                                                                                          | Material organized well, but some sections and sub-sections are not identified clearly                                                                                                                                                | Graphs, tables or diagrams are not easy to understand                                                                                                                                                 |
| 10. Project description (see Program Book)         | <b>3</b>   | Text rambles, points made are only understood with repeated reading, and key points are not organized                                                                                                                    | Articulates ideas, but writing is somewhat disjointed, superfluous or difficult to follow                                                                                                                                             | Articulates ideas clearly and concisely                                                                                                                                                               |
| 11. Group dynamics/member participation            | <b>3</b>   | No interaction between team members. One member only talks                                                                                                                                                               | Interaction between team members, but one person leads talk                                                                                                                                                                           | Discussion by all team members; all understand project                                                                                                                                                |
| 12. Quality, effectiveness, & use of visual aids   | <b>3</b>   | Multiple slides are unclear or incomprehensible. Presents well mechanically:<br>· Makes eye contact<br>· Can be easily heard<br>· Speaks comfortably with minimal prompts (notecards)<br>· No distracting nervous habits | Visual aides have minor errors or are not always clearly visible. Has some minor difficulties with the mechanical aspects of the presentation<br>· Eye contact is sporadic<br>· Occasionally difficult to hear or understand speaking | Uses visual aids effectively. Presents well mechanically:<br>· Makes eye contact<br>· Can be easily heard<br>· Speaks comfortably with minimal prompts (notecards)<br>· No distracting nervous habits |
