

4. Communication & Professional Skills

Rating (1-5): 4

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

PRESENTATION SKILLS ARE GOOD OVERALL.

- 1) BETTER MIC IN CLASSROOM, FOR BOTH PRESENTERS + QUESTIONS
- 2) SPREAD OUT POSTER PRESENTATIONS A LITTLE TO REDUCE BACKGROUND NOISE.

5. Program & Curriculum Improvement

Rating (1-5): 4

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

CONSIDER SOME ^{OR MORE} GUEST INDUSTRY LECTURES, Q+As ETC
TO PROVIDE INDUSTRY INSIGHT.

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): 3-4

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

SIMILAR STYLE OF PRESENTATION, QUALITY OF POSTER
MATERIALS NOT QUITE AS HIGH AS I REMEMBER? MAYBE?

STUDENTS WERE GREAT AT KNOWING THEIR PROCESSES AND
RESPONDING TO QUESTIONS.

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 3-4

From your perspective, how well do our students demonstrate readiness for industry practice? What specific skills or knowledge areas are strong, and where do you see gaps?

THE EQUIPMENT SIZING, SAFETY ANALYSIS (PHA, HAZOP) AND COST ESTIMATION EXERCISES DEFINITELY HELP TO GIVE THE STUDENTS A GLIMPSE INTO INDUSTRY. THE HARDER SUBJECT MATTER TO EXPOSE CHEM EJS TO IN SCHOOL IS CROSS-DISCIPLINE KNOWLEDGE.

2. Engineering Judgment & Decision-Making

Rating (1-5): 2-3

To what extent did the teams demonstrate sound engineering judgment in their design choices? Can you identify examples where decisions were particularly strong or needed improvement?

SIMILAR ISSUES TO MOST YEARS, SOME DESIGN EXPECTATIONS ARE NOT ALWAYS REALISTIC AND EQUIPMENT SIZING IS TAKEN AS 100% ACCURATE WITH NO FRAME OF REFERENCE. AS MENTORS, WE DO TRY TO GUIDE STUDENTS HERE.

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 3

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

WE OFTEN HAVE TO MASSAGE COST NUMBERS TO GET THE UNDERLYING CONCEPTS TO MAKE SENSE. I FEEL LIKE PERFORMING A SMALL PHA/HAZOP USING THE CORRECT METHODOLOGY IS BENEFICIAL OVER A HIGH LEVEL MSDS/HAZARD REVIEW.

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 3

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

THE STUDENTS HAVE STRONG FUNDAMENTAL SKILLS & KNOWLEDGE. THEY WILL DEVELOP MORE SKILLS ON MORE TOPICS AS THEY GROW.

2. Engineering Judgment & Decision-Making

Rating (1-5): 4

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

THE TEAMS MADE LOGICAL DECISIONS BASED ON THEIR DATA AND INFORMATION AVAILABLE TO THEM.

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 4

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

THESE ENGINEERS JUST NEED ADDITIONAL EXPERIENCE AS THEIR CAREERS EXPAND. THEY WILL LEARN THAT PPE IS NOT A PROCESS DESIGN FEATURE BUT ALWAYS REQUIRED.

4. Communication & Professional Skills

Rating (1-5): 4

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

SEVERAL TEAM MEMBERS IN SEVERAL TEAMS SHOWED
DEFINITE IMPROVEMENT IN COMMUNICATIONS.

5. Program & Curriculum Improvement

Rating (1-5): 4

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

START EARLIER TO GIVE TEAMS A CHANCE TO MAKE
ASPEN SIMULATIONS WORK.

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): 3

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

GOOD PLATFORM.

Muhammad
Abdelhader

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 4

From your perspective, how well do our students demonstrate readiness for industry practice?
What specific skills or knowledge areas are strong, and where do you see gaps?

They all seem to be ready for industry. However, coming from wastewater I've noticed none of them took the waste into consideration. Might be a good idea to implement into the curriculum - Teaching them how to properly separate the waste.

2. Engineering Judgment & Decision-Making

Rating (1-5): 4

To what extent did the teams demonstrate sound engineering judgment in their design choices?
Can you identify examples where decisions were particularly strong or needed improvement?

Most design choices were already designed from industry. I do like how they implemented those designs and made their own.

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 5

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

No complaints here! They took everything into consideration.

4. Communication & Professional Skills

Rating (1-5): 3

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

I would like to see all students participate.

5. Program & Curriculum Improvement

Rating (1-5): 4

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

Give more in depth in cost analysis.

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): 3

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

I presented last year and I would say everything was very similar.

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 4

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

From a technical perspective, the students do a good job at elaborating upon process/chemical manufacturing technology.

Some groups struggled to explain the chemical market their process/business chose to compete in. I like to emphasize that a business that leverages sustainability for market appeal needs to still find ways to mitigate adverse market forces (commoditized products, regulatory backing/incentives).

2. Engineering Judgment & Decision-Making

Rating (1-5): 3

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

Some improvement to be made. Students need to go beyond the technical details when pitching a business model for their process. What do I do next with this market research? Is the market attractive to enter at this time? Incorporate some business strategy frameworks (Porter's competitive forces) to get students to think beyond technical info.

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 4

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

Given the objectives of this class, a lot of these pitches remind me of ESP firms promoting industrial processes that want to leverage market/sustainability incentives.

4. Communication & Professional Skills

Rating (1-5): 4

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

All group members had and took the opportunity to speak up. Information is well digestible, PFDs can be hard to read.

5. Program & Curriculum Improvement

Rating (1-5): 4

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

W/L:

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): 4

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

For the 3rd consecutive presentation Expo, students are very engaged.

5 = Best 1 = worst

Dance

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 4

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

I think the instruction is available but the grasp by the students varies.

2. Engineering Judgment & Decision-Making

Rating (1-5): 4

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

This is a developing area for students - there is a lot of specialized knowledge in every industry that one learns after joining. In my experience, most students can't reason through what will happen next for process changes.

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 5

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

The program integrates all the parts of a basic engineering package. I like the approach; it is very close to my industry experience.

4. Communication & Professional Skills

Rating (1-5): 5

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

The opportunity to present project progress multiple times and compete with posters multiple times helps the students polish their skills. Most of the class were very good this year.

5. Program & Curriculum Improvement

Rating (1-5): 4

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

- The PFD's could improve. I don't think most students understood that the orientation, connections, and appearance of the equipment should closely match real life.
- It is clear during HAZOP that most students don't understand how the processes work so that is a good exercise to continue.
- Cost estimates tend to come out low.

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): 5

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

Definitely a high standard this year.

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 4

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

- Not much focus on controls
- overall, seems like a solid group and people already have jobs lined up.

2. Engineering Judgment & Decision-Making

Rating (1-5): 4

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 3

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

- There was a lot of "This was the percentage the book said" and not always focus on real-world examples on costs or returns.

4. Communication & Professional Skills

Rating (1-5): 5

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

5. Program & Curriculum Improvement

Rating (1-5): 5

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): 5

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

Noticeable change over 2 years ago. Not sure if smaller class size or two mentors were big factors,

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): ____

From your perspective, how well do our students demonstrate readiness for industry practice?
What specific skills or knowledge areas are strong, and where do you see gaps?

The simulations were very good and their understanding of process equipment.

I believe there is a gap in safety systems (pressure relief specific).

2. Engineering Judgment & Decision-Making

Rating (1-5): ____

To what extent did the teams demonstrate sound engineering judgment in their design choices?
Can you identify examples where decisions were particularly strong or needed improvement?

Sound engineering judgment was used when they understood the extent to which tax incentives could ruin their economics.

I think "OSBL" needs more consideration. If they need hydrogen or have waste water, they need to consider if they are buying that and putting it in OSBL, or if there is a pipeline to use.

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): ____

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

Sustainability and operability were covered well. I think more emphasis on how to make the process safe, rather than stating the hazards, should be incorporated.

4. Communication & Professional Skills

Rating (1-5): ____

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

They did a good job explaining units that I wasn't familiar with and were receptive to feedback on units I had experience with

5. Program & Curriculum Improvement

Rating (1-5): ____

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

More focus on prevention of safety events rather than SDS and PPE

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): ____

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

4, I felt there was better understanding of controls.

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 4

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

- strong {
- Good understanding of process flow & simulation
 - Great professionalism & presentation skills
 - Good understanding of process optimization (heat integration, re-use or sale of by products, transportation/location)

2. Engineering Judgment & Decision-Making

Rating (1-5): 4

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

strong example: using heat from exothermic reactions to potentially provide heating of upstream endothermic reactions. (as a means to reduce equipment size & not necessarily replace equipment like heaters completely).

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): ____

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

• Good emphasis on safety & sustainability

Improvements

• Some students ~~only~~ focused heavily on PPE but I think it would be good for them to consider cause & effect, shutdown scenarios, etc.

4. Communication & Professional Skills

Rating (1-5): 5

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

all were professional. I think the format done by Team #2 should be the standard in terms of visuals. "cleaner slides..."

5. Program & Curriculum Improvement

Rating (1-5): 4

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

Maybe introduce topics related to waste management (non-usable byproducts, catalyst regeneration or metals recovery, waste treatment of spent solvents or caustic, etc.) or regeneration

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): N/A

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 5

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

Considering their experience, they are ready for their first roles in industrial practice. They were good at research and applying knowledge to basic design.

2. Engineering Judgment & Decision-Making

Rating (1-5): 4

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

Application of knowledge depended on the group. Some were more prepared than others. But you could sense for some groups they were able to explain rationale very well.

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 4

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

Often groups had challenges estimating costs, comparing their project costs to real-world projects, understanding how to evaluate safety & sustainability.

But considering their level of experience, they're pretty good.

4. Communication & Professional Skills

Rating (1-5): 5

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

Overall most groups were very good at this. I got a sense they had a chance to ~~diff~~ divide work among the team.

5. Program & Curriculum Improvement

Rating (1-5): 5

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

Continuing good mentors to add "real world" perspective.

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): 5

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

Before it was good, and it still is good. Students are well-prepared and engaged.

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 4

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

The projects included a variety of topics that align with current company trends. However, it will be good if they can have other types of projects outside oil & refining.

2. Engineering Judgment & Decision-Making

Rating (1-5): 4

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

I think all the teams I judged ~~have~~ had good engineering judgement. They looked into emissions and most of all, sustainability. Some teams were better than others in standing up for their decision making process than others, but they didn't differ by much.

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 5

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

Sustainability is a huge topic right now, so all teams did a great job accounting for this. Other integration could be waste management, thermal oxidizer, etc.

4. Communication & Professional Skills

Rating (1-5): 5

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

I believed all of them did great on this.

5. Program & Curriculum Improvement

Rating (1-5): _____

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): 5

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

It was more difficult to differentiate between the projects/teams strengths and weakness. Great ~~more~~ for the teams, bad for judges :)

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 3

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

I appreciate that students are more aware of safety standards ~~to~~ than years past. The students are much more prepared for their first jobs.

2. Engineering Judgment & Decision-Making

Rating (1-5): _____

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 3

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

TIC - total installed cost of projects were low which affected the economics. made projects more appealing. falsely.

I liked that sustainability was a key part of projects

4. Communication & Professional Skills

Rating (1-5): 3

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

Some were very good at presenting and others need help. Having good presentation skills is really important to their careers. All ~~kids~~ students were professional and spoke well.

5. Program & Curriculum Improvement

Rating (1-5):

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

I know there is a lot to cover, but the project cost seemed to be low. I think it's important to provide realistic costs so when they go into the job market they are more prepared so that project justification vs economic's ~~is~~ are more accurate.

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): 4

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

- I thought that last year's teams focused more on the process simulator than this year.
- All the teams seemed to be more engaged this year. Last year some teams there were some that did more of the work. This year everyone took turns speaking.

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 4

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

Overall, I was very impressed with their knowledge of their designs! Esp. groups that considered (or based their ideas on) tax credits and mandatory regulations. I do see a gap (for only one group, team 1) in the of understanding of their chemistry and process. Otherwise, everyone else was great.

2. Engineering Judgment & Decision-Making

Rating (1-5): 5

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

All students provided excellent judgment and reasoning for their products. Processes, I'm impressed at design choices as well. Improvements might be sourcing of raw materials as well as locations of plants.

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 4

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

I think, in general, more thought could go to location, sourcing of raw material, cost of personnel/expertise of personnel. Also, many students (if not all) base their tech on patents. Cost analysis should consider the cost of licensing the tech.

4. Communication & Professional Skills

Rating (1-5): 5

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

overall, students did an excellent job presenting their projects. some could have improved on quality of print jobs, but otherwise excellent.

5. Program & Curriculum Improvement

Rating (1-5): 5

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

licensing of tech is something they should consider.

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): _____

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

N/A

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 5

From your perspective, how well do our students demonstrate readiness for industry practice?
What specific skills or knowledge areas are strong, and where do you see gaps?

I've attended Sr. Design Showcases from a couple of colleges over the past several years. UIC prepares their students really well for the real-world experiences. There is a maturity and drive to be successful which is refreshing.

2. Engineering Judgment & Decision-Making

Rating (1-5): 4

To what extent did the teams demonstrate sound engineering judgment in their design choices?
Can you identify examples where decisions were particularly strong or needed improvement?

Each team thought through their site location selection with sound judgement (competition, market sizes, waste stream, logistics).

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 3

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

Teams did a good job using HAZOP, reviewing environmental considerations, and sharing key notes on their posters.

The Economics section could be better. Tools seem to be outdated to real world CapEX and Ops Factors. Numbers were understated.

4. Communication & Professional Skills

Rating (1-5): 5

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

Students did a really good job presenting their work and defending challenging questions regarding their project decisions.

5. Program & Curriculum Improvement

Rating (1-5): 4

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): 3

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

UIC students held to the same standards as previous years.

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 4

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

The students seem to have strong base theoretical knowledge but still lack practical application of the knowledge

2. Engineering Judgment & Decision-Making

Rating (1-5): 3

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

Practical knowledge will help improve this aspect significantly exposure to real world processes that are currently operating is one of the few ways to improve engineering judgment

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 3

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

Finding the information can be difficult so incorporating those properly might require significant input from mentors.

Allowing some costs to be simply put into a box "OSBL" can make something unrealistic seem like its reasonable

4. Communication & Professional Skills

Rating (1-5): 5

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

Everyone did a great job. Rather than splitting the presentation and having one person cover one section, having them talk ~~about~~ about it all at once ~~it~~ would be better

5. Program & Curriculum Improvement

Rating (1-5): 3

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

Partner each group with a company and have them focus on an actual improvement or project the company is working on. This gives the company free labor and the students real-world experience

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): ____

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

Anthony T.

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 4

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

Technically they were all very strong. could be more vocal and comfortable presenting.

2. Engineering Judgment & Decision-Making

Rating (1-5): 5

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

I thought all topics selected were very applicable to current events. It was not just flashy / trendy topics to catch a headline but rather a real-world issue w/ a practical solution to solve it.

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 3

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

- I think all groups tended to briefly touch on process safety, I would've liked for them to expand on that more.
- Economics and Operability were more thorough.

4. Communication & Professional Skills

Rating (1-5): 4

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

I think they could've afforded to be more technical during our session since we are largely CHE-based.

5. Program & Curriculum Improvement

Rating (1-5): 5

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

It seems everyone is very geared towards Process Engineering. I would like to see more exposure to controls, reliability, etc. and for it to be known there are multiple pathways.

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): N/A

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

N/A

2026 CHE SENIOR DESIGN SHOWCASE FEEDBACK

1. Curriculum Alignment & Industry Readiness

Rating (1-5): 5

From your perspective, how well do our students demonstrate readiness for industry practice?

What specific skills or knowledge areas are strong, and where do you see gaps?

Very well. They all seemed articulate and knowledgeable about their topics.

2. Engineering Judgment & Decision-Making

Rating (1-5): 4

To what extent did the teams demonstrate sound engineering judgment in their design choices?

Can you identify examples where decisions were particularly strong or needed improvement?

In general, pretty well. There was a time or two when we asked, why did you do X and not Y, and they referred to their mentor's recommendations. Encourage them to think outside the box instead of leaning on existing practices.

3. Real-World Constraints Integration (Safety, Sustainability, Economics, etc.)

Rating (1-5): 5

How effectively did the projects incorporate real-world constraints such as safety, sustainability, economics, and operability? What additional considerations would you expect in an industry setting?

Pretty well, no issues there.

4. Communication & Professional Skills

Rating (1-5): 4

How well did the teams communicate their technical work to a mixed audience? What suggestions do you have to improve students' presentation and professional communication skills?

Generally very well. There were some teams whose poster organization was different from their order of speaking, making it harder to follow.

Also, encourage students to have a pointer so that they can point to something while standing farther. Some students waved a hand in the general direction, and I had a hard time figuring out what I'm supposed to be looking at.

5. Program & Curriculum Improvement

Rating (1-5): 5

Based on what you observed today, what changes would you recommend for our curriculum or senior design sequence to better prepare students for industry?

I love that you use industry mentors. Great idea.

6. Improvement Compared to Previous Years (if applicable)

Rating (1-5): _____

(1 = Significant decline, 3 = No noticeable change, 5 = Significant improvement)

If you have participated in previous Senior Design Showcases, how would you evaluate the overall improvement in student performance and project quality compared to last year?

N/A - first timer judge
