Additional comments:

Can we add equity and inclusion into one of these statements?

Very good

I believe that we have a well designed program of study. The main challenge is in engaging the students to make the most of the opportunities that we are providing.

I had hard time answering these questions. Only a small number of students reflect my answers and for an even smaller number I will answer as STRONG

NA

N/A

Students in my course have expressed that they have no formal training in professional writing/professional development as well as team work/ethics and safety. Perhaps this is more emphasized in senior ChE labs/design

None

The new concentrations will help expand the scope of opportunities for the graduates even further.

The PEOs are all strong and appropriate goals for the program.

N/A

We should recruit more research and teaching faculty member to improve the teacher/student ratio.

None

We can introduce UGs to advanced concepts only if all the courses are organized to coordinate such efforts starting from the sophomore year.
