

Spring 2026

5 SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program,. Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria:
(5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

- | | |
|----------|---|
| <u>5</u> | Ability to apply knowledge of mathematics, science and engineering. |
| <u>5</u> | Ability to design and conduct experiments, as well as to analyze and interpret data. |
| <u>5</u> | Ability to design a system, component, or process to meet desired needs. |
| <u>5</u> | Ability to function on multi-disciplinary teams. |
| <u>5</u> | Ability to identify, formulate, and solve engineering problems. |
| <u>3</u> | Understanding of professional and ethical responsibility. |
| <u>5</u> | Ability to communicate effectively. |
| <u>4</u> | Broad education necessary to understand the impact of engineering solutions in a global and societal context. |
| <u>4</u> | Recognition of the need for, and an ability to engage in life-long learning. |
| <u>4</u> | Knowledge of contemporary issues. |
| <u>5</u> | Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. |
| <u>4</u> | Overall, do you feel that your undergraduate degree prepared you for your career? |

(2.) Which courses or topics were the most interesting or useful?

- CHE 301
- CHE 433
- CHE 341
- CHE 381/382

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

- CHEM 234
- CHEM 342
- CHE 330
- CME 260

(4.) What courses/topics should we consider deleting or adding to the curriculum?

Remove

- CME 260: Excessive since we already take CHE 230 and CHE 330
- CHEM 234: CHEM 232 and CHEM 233 have great application, CHEM 234 has almost no relevancy to our degree
- CHEM 342: Excessive chemistry course that can be replaced with a class mentioned below CHE 302

Add

- Thermodynamic Theory: Essentially more thermodynamic theory rather than application. EX. CHE 302
- CHE 230 and CHE 330 can be combined into 1 class no need for 2 separate classes with major overlap
- An additional software based class, maybe an intro to Aspen or Engineering Design

(5.) Do you have any additional comments or suggestions?

None

SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program, Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria:
(5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

- | | |
|----------|---|
| <u>3</u> | Ability to apply knowledge of mathematics, science and engineering. |
| <u>3</u> | Ability to design and conduct experiments, as well as to analyze and interpret data. |
| <u>3</u> | Ability to design a system, component, or process to meet desired needs. |
| <u>4</u> | Ability to function on multi-disciplinary teams. |
| <u>3</u> | Ability to identify, formulate, and solve engineering problems. |
| <u>4</u> | Understanding of professional and ethical responsibility. |
| <u>5</u> | Ability to communicate effectively. |
| <u>5</u> | Broad education necessary to understand the impact of engineering solutions in a global and societal context. |
| <u>5</u> | Recognition of the need for, and an ability to engage in life-long learning. |
| <u>4</u> | Knowledge of contemporary issues. |
| <u>3</u> | Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. |
| <u>3</u> | Overall, do you feel that your undergraduate degree prepared you for your career? |

(2.) Which courses or topics were the most interesting or useful?

CHE 311
CHE 210
CHEM 342

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

CHE 230
CME 260
CHE 301
CS 109
ECE 210
CHEM 222

(4.) What courses/topics should we consider deleting or adding to the curriculum?

CHE 230/ CME 260 they're the same class

CS109 not useful

CHEM 222 course is a mess

CHEM 234 smaller continuation of Orgo 1

(5.) Do you have any additional comments or suggestions?

We need more focus on real projects to build our resume

SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program,. Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria:

(5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

Ability to apply knowledge of mathematics, science and engineering.	4
Ability to design and conduct experiments, as well as to analyze and interpret data.	4
Ability to design a system, component, or process to meet desired needs.	4
Ability to function on multi-disciplinary teams.	2
Ability to identify, formulate, and solve engineering problems.	4
Understanding of professional and ethical responsibility.	4
Ability to communicate effectively.	3
Broad education necessary to understand the impact of engineering solutions in a global and societal context.	4
Recognition of the need for, and an ability to engage in life-long learning.	4
Knowledge of contemporary issues.	4
Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.	4
Overall, do you feel that your undergraduate degree prepared you for your career?	3

(2.) Which courses or topics were the most interesting or useful?

- CHE 311
- CHE 312
- CHE 457

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

- CHEM 234
- CME 260

(4.) What courses/topics should we consider deleting or adding to the curriculum?

- CHEM 234

(5.) Do you have any additional comments or suggestions?

NONE

SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program,. Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria:
(5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

- | | |
|----------|---|
| <u>5</u> | Ability to apply knowledge of mathematics, science and engineering. |
| <u>5</u> | Ability to design and conduct experiments, as well as to analyze and interpret data. |
| <u>5</u> | Ability to design a system, component, or process to meet desired needs. |
| <u>5</u> | Ability to function on multi-disciplinary teams. |
| <u>5</u> | Ability to identify, formulate, and solve engineering problems. |
| <u>5</u> | Understanding of professional and ethical responsibility. |
| <u>5</u> | Ability to communicate effectively. |
| <u>5</u> | Broad education necessary to understand the impact of engineering solutions in a global and societal context. |
| <u>5</u> | Recognition of the need for, and an ability to engage in life-long learning. |
| <u>5</u> | Knowledge of contemporary issues. |
| <u>5</u> | Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. |
| <u>5</u> | Overall, do you feel that your undergraduate degree prepared you for your career? |

(2.) Which courses or topics were the most interesting or useful?

CHE 301, CHE 311, CHE 312, CHE 313, CHE 321, CHE 341, CHE 433

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

CHE 230, CHE 330, CME 260, CS 109

(4.) What courses/topics should we consider deleting or adding to the curriculum?

I would consider deleting CHE 230 and CS 109. I would recommend picking up CS 107 to learn python rather than matlab.

(5.) Do you have any additional comments or suggestions?

I don't!

SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program,. Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria:
(5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

- | | |
|----------|---|
| <u>5</u> | Ability to apply knowledge of mathematics, science and engineering. |
| <u>4</u> | Ability to design and conduct experiments, as well as to analyze and interpret data. |
| <u>4</u> | Ability to design a system, component, or process to meet desired needs. |
| <u>4</u> | Ability to function on multi-disciplinary teams. |
| <u>4</u> | Ability to identify, formulate, and solve engineering problems. |
| <u>5</u> | Understanding of professional and ethical responsibility. |
| <u>4</u> | Ability to communicate effectively. |
| <u>4</u> | Broad education necessary to understand the impact of engineering solutions in a global and societal context. |
| <u>5</u> | Recognition of the need for, and an ability to engage in life-long learning. |
| <u>4</u> | Knowledge of contemporary issues. |
| <u>4</u> | Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. |
| <u>4</u> | Overall, do you feel that your undergraduate degree prepared you for your career? |

(2.) Which courses or topics were the most interesting or useful?

The most interesting courses were CHE 321, the chemical reaction engineering course, CHE 311 the fluid mechanics course and CHE 396, senior design.

The most useful courses were Differential equations, Calculus 1-3 and CHE 301 Chemical Engineering thermodynamics and CHE 311. Topics covered in these classes appeared constantly.

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

The least useful courses were the majority of the higher-level chemistry courses. CHEM 234 Organic Chemistry 2 is an extremely niche topic that is hard to imagine a practical application for in industry. Organic chemistry 1 is necessary and the lab provided a good way to obtain hand on experience with processes, but Organic Chemistry 2 felt unnecessary. Physical Chemistry was also a rehash of chemical engineering thermodynamics, covering essentially the same content for a majority of the course. This made the class feel redundant and as evident by the grades it was the chemical engineers obtaining a majority of the A's despite the attempt of the professor to boost the grade of the chemistry students. Analytical chemistry also felt niche and not relevant to chemical engineering unless you are in a lab setting. Running t-test and p-tests on data seems largely unnecessary as often times it is easy to tell at a glance if something is wrong with the data or operation of a unit. CME 260 and CHE 230 are also essentially the same course with both them being required being essentially taking the same course twice. CS 109 is not used as most of the time in coursework or otherwise Python or VBA is used.

(4.) What courses/topics should we consider deleting or adding to the curriculum?

It would be ideal to replace the classes that are redundant like CHE 230 and CME 260 or the niche classes like Organic Chemistry 2 with more practical courses like a statistics course, a biology course or higher-level physics courses. Adding a 300 level computational methods course that introduces the students to the basics of ASPEN simulations and Python coding would ease the issues of having only one or two students know ASPEN in the design project.

(5.) Do you have any additional comments or suggestions?

CHE 313 the distillation column course should also be done on the computer as performing hand calculations for minimum reflux ratio and number of trays is slow and drawing a McCabe-Thiele diagram by hand is not as accurate as drawing it on excel or using empirical correlations. It should also incorporate some type of introduction to the control of the columns. CHE 301 should realistically be a 4 credit hour course due to level of work demanded for each individual assignment. The idea of the higher level chemistry classes is good in theory but in practice it is clear that most of the chemistry professors are more interested in their research than in teaching as is apparent by their level of effort. Some will read directly off their slides and will often-times just be flat out incorrect. Having to spend time with these professors was detrimental to the education of most engineering and chemistry students. This time would be better spent in engineering department or any other department. In general this is not an issue of the course material in general but it appears that the chemistry department and the college of engineering are battling for students to take their courses. It also seems like some of the chemistry professors have a vendetta against the chemical engineers as is clear with the class that took physical chemistry last semester. The professor kept changing the grading curve in an attempt to boost his chemistry students which felt spiteful. Overall the average student experience with the chemistry professors minus Dr Yermolina have been exceedingly negative. On the other hand the engineering professors are more often than not more helpful and provide more relevant knowledge. It would be ideal to take more courses with them and less with the chemistry department. The physics and math departments were also positive experiences.

SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program,. Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria:
(5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

- | | |
|----------|---|
| <u>5</u> | Ability to apply knowledge of mathematics, science and engineering. |
| <u>5</u> | Ability to design and conduct experiments, as well as to analyze and interpret data. |
| <u>5</u> | Ability to design a system, component, or process to meet desired needs. |
| <u>5</u> | Ability to function on multi-disciplinary teams. |
| <u>5</u> | Ability to identify, formulate, and solve engineering problems. |
| <u>5</u> | Understanding of professional and ethical responsibility. |
| <u>5</u> | Ability to communicate effectively. |
| <u>5</u> | Broad education necessary to understand the impact of engineering solutions in a global and societal context. |
| <u>5</u> | Recognition of the need for, and an ability to engage in life-long learning. |
| <u>5</u> | Knowledge of contemporary issues. |
| <u>5</u> | Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. |
| <u>5</u> | Overall, do you feel that your undergraduate degree prepared you for your career? |

(2.) Which courses or topics were the most interesting or useful?

Both the Chemical Engineering Labs and Senior Design classes. These four classes felt the most involved and engaging as they were team-based endeavors. For the former, I enjoyed the simulated lab environment and reporting process. Senior Design, while stressful at times, was helpful because it provided direct evaluations and assistance from professionals in the field. Professional Development Seminar was also interesting, as it explored the possible avenues and career paths that can be taken and included firsthand accounts from recent graduates.

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

Organic Chemistry I & II. I have never used the materials learned in those classes in any of the core chemical engineering courses. Out of all the organic chemistry courses, only Organic Chemistry Laboratory was relevant, as the skills learned can be universally applied to most laboratory courses.

(4.) What courses/topics should we consider deleting or adding to the curriculum?

Organic Chemistry II. While having the added background knowledge in Organic Chemistry I is useful, especially for students who wish to pursue careers in the pharmaceutical field. Organic Chemistry II feels, as mentioned previously, redundant within broader chemical engineering curriculum and goes beyond its general interests. The core of the major is reliant on thermodynamic theory with a large emphasis on mathematics and physics. The course feels like a detour from the curriculum and its purpose is more aligned towards those who desire to become full fledged chemists or doctors.

(5.) Do you have any additional comments or suggestions?

N/A

SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program,. Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria:
(5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

- 5 Ability to apply knowledge of mathematics, science and engineering.
- 5 Ability to design and conduct experiments, as well as to analyze and interpret data.
- 5 Ability to design a system, component, or process to meet desired needs.
- 5 Ability to function on multi-disciplinary teams.
- 5 Ability to identify, formulate, and solve engineering problems.
- 5 Understanding of professional and ethical responsibility.
- 5 Ability to communicate effectively.
- 5 Broad education necessary to understand the impact of engineering solutions in a global and societal context.
- 5 Recognition of the need for, and an ability to engage in life-long learning.
- 5 Knowledge of contemporary issues.
- 5 Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
- 5 Overall, do you feel that your undergraduate degree prepared you for your career?

(2.) Which courses or topics were the most interesting or useful?

Che 301, Che 321, Che 341

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

che 330, che 230, Chem 342

(4.) What courses/topics should we consider deleting or adding to the curriculum?

delete Chem 342, cme 260, Chem 234

(5.) Do you have any additional comments or suggestions?

nah

SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program,. Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria: (5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

- | | |
|----------|---|
| <u>5</u> | Ability to apply knowledge of mathematics, science and engineering. |
| <u>4</u> | Ability to design and conduct experiments, as well as to analyze and interpret data. |
| <u>4</u> | Ability to design a system, component, or process to meet desired needs. |
| <u>4</u> | Ability to function on multi-disciplinary teams. |
| <u>4</u> | Ability to identify, formulate, and solve engineering problems. |
| <u>2</u> | Understanding of professional and ethical responsibility. |

| <u>4</u> | Overall, do you feel that your undergraduate degree prepared you for your career? |

(2.) Which courses or topics were the most interesting or useful?

433, 301, 205

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

230, 330 and P-Chem 1

(4.) What courses/topics should we consider deleting or adding to the curriculum?

Remove: 230 & 330 content is almost identical to CME260 and doesn't have broad application outside of the context of the course. While being interesting to some students the application of the content is not carried to other Che courses for the reactions or 433 where there is no polymerization simulations. P-Chem 1 the class is a poorly taught version of 301, while having a class that is 100% theory is important for thermo trusting the chemistry department for this is not good.

Make a 302 class where 301 is all the application inside the calculator and 302 is pure theory as it is 301 feels like a 6 credit class from a workload perspective and requiring students for 3 hrs of instruction a week on both application and theory would allow for more understanding of content and more complex application, these should have to be attached classes meaning you take them the same semester as each other and it needs to be the same professor for both.

Add a 300 level numerical methods class that is a continuation of 205 further expanding on the content and adding python to the curriculum as it's a necessary language for parts of 311, 312 and all of 321, include content from Dr. C's Calculator as a fundamental understanding of how the different numeric work is really important things like Newton method, cubic and Akima splines and implementing them yourself in either excel or python.

300 and maybe 200 level aspen, getting a really solid understanding in a "Introduction to Process Simulation" would be really useful instead of trying to climb the mountain that is 433 where the learning is more Darwinian the semester before 433 or senior design 1.

Swap CS-109 for CS-107 as 109 is MATLAB which is useless for the degree ive never used it in all 4 years outside of the class where as 107 is the intro to python course

(5.) Do you have any additional comments or suggestions?

Evaluate all non-department courses that are prerequisites for ChE classes and give 100 level ChE courses on the content instead of physics, chemistry, and physics, the best thing that could happen is greater integration of the curriculum from day one to graduation, and making sure that content is regularly reinforced I shouldn't take a 100 level class my first semester and use that info in my last semester with a complete knowledge gap and with no emphasis on the material in between.

SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program,. Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria: (5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

- | | |
|----------|---|
| <u>4</u> | Ability to apply knowledge of mathematics, science and engineering. |
| <u>5</u> | Ability to design and conduct experiments, as well as to analyze and interpret data. |
| <u>3</u> | Ability to design a system, component, or process to meet desired needs. |
| <u>5</u> | Ability to function on multi-disciplinary teams. |
| <u>3</u> | Ability to identify, formulate, and solve engineering problems. |
| <u>5</u> | Understanding of professional and ethical responsibility. |
| <u>4</u> | Ability to communicate effectively. |
| <u>4</u> | Broad education necessary to understand the impact of engineering solutions in a global and societal context. |
| <u>5</u> | Recognition of the need for, and an ability to engage in life-long learning. |
| <u>3</u> | Knowledge of contemporary issues. |
| <u>4</u> | Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. |
| <u>4</u> | Overall, do you feel that your undergraduate degree prepared you for your career? |

(2.) Which courses or topics were the most interesting or useful?

I was very interested in Process Control, Senior Design 1&2, and Unit Ops Lab as I feel they are the most connected to real-life engineering challenges/tasks. In addition, CHE 311 & 312 are also interesting to me as they teach a new kind of math that I wasn't familiar with before

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

I feel CHE 230 and CME 260 were the least interesting and helpful as they felt more like a chemistry class than an engineering class

(4.) What courses/topics should we consider deleting or adding to the curriculum?

I think adding a chemistry course that's designed for engineers would be extremely helpful since I feel like chemical engineers shouldn't need to know in detail how an arrow-pushing diagram works

(5.) Do you have any additional comments or suggestions?

SENIOR EXIT SURVEY

SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program,. Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria: (5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

<u>5</u>	Ability to apply knowledge of mathematics, science and engineering.
<u>5</u>	Ability to design and conduct experiments, as well as to analyze and interpret data.
<u>5</u>	Ability to design a system, component, or process to meet desired needs.
<u>5</u>	Ability to function on multi-disciplinary teams.
<u>5</u>	Ability to identify, formulate, and solve engineering problems.
<u>5</u>	Understanding of professional and ethical responsibility.
<u>5</u>	Ability to communicate effectively.
<u>5</u>	Broad education necessary to understand the impact of engineering solutions in a global and societal context.
<u>5</u>	Recognition of the need for, and an ability to engage in life-long learning.
<u>5</u>	Knowledge of contemporary issues.
<u>5</u>	Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
<u>5</u>	Overall, do you feel that your undergraduate degree prepared you for your career?

(2.) Which courses or topics were the most interesting or useful?

Chemical engineering courses such as thermodynamics, transport phenomena, reaction engineering, and process design were very interesting and useful. The laboratory courses were also extremely valuable because they provided hands-on experience and helped apply theoretical concepts to real engineering problems

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

None in particular. All courses contributed to building a strong foundation in chemical engineering

(4.) What courses/topics should we consider deleting or adding to the curriculum?

The curriculum is well balanced. The laboratory and design courses are especially helpful and should continue to be part of the program.

(5.) Do you have any additional comments or suggestions?

Overall, I had a very positive experience in the chemical engineering program. The courses, laboratories, and faculty provided a strong academic and practical foundation and prepared me well for future career opportunities.

SENIOR EXIT SURVEY

| 5 | Broad education necessary to understand the impact of engineering solutions in a global and societal context. |
| 5 | Recognition of the need for, and an ability to engage in life-long learning. |
| 4 | Knowledge of contemporary issues. |
| 3 | Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. |
| 3 | Overall, do you feel that your undergraduate degree prepared you for your career? |

(2.) Which courses or topics were the most interesting or useful?

CHE 311
CHE 210
CHEM 342

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

CHE 230
CME 260
CHE 301
CS 109
ECE 210
CHEM 222

(4.) What courses/topics should we consider deleting or adding to the curriculum?

CHE 230/ CME 260 they're the same class

CS109 not useful

CHEM 222 course is a mess

CHEM 234 smaller continuation of Orgo 1

(5.) Do you have any additional comments or suggestions?

We need more focus on real projects to build our resume

SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program,. Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria:
(5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

- | | |
|----------|---|
| <u>3</u> | Ability to apply knowledge of mathematics, science and engineering. |
| <u>5</u> | Ability to design and conduct experiments, as well as to analyze and interpret data. |
| <u>4</u> | Ability to design a system, component, or process to meet desired needs. |
| <u>5</u> | Ability to function on multi-disciplinary teams. |
| <u>3</u> | Ability to identify, formulate, and solve engineering problems. |
| <u>4</u> | Understanding of professional and ethical responsibility. |
| <u>4</u> | Ability to communicate effectively. |
| <u>3</u> | Broad education necessary to understand the impact of engineering solutions in a global and societal context. |
| <u>4</u> | Recognition of the need for, and an ability to engage in life-long learning. |
| <u>2</u> | Knowledge of contemporary issues. |
| <u>3</u> | Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice. |
| <u>4</u> | Overall, do you feel that your undergraduate degree prepared you for your career? |

(2.) Which courses or topics were the most interesting or useful?

process control & unit operations were the most useful. 311, 313 felt the most useful in terms of principles.

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

321, specifically the way it was taught, was not interesting.
205 did not seem useful.

↳ coding in VBA

(4.) What courses/topics should we consider deleting or adding to the curriculum?

removing polymer 2 and 210,
unnecessary in addition
to the other courses we thermo
have to take

adding an inorganic chem course.

(5.) Do you have any additional comments or suggestions?

making Aspen mandatory
so that pchem & other
courses are forced to
work around it.

(2.) Which courses or topics were the most interesting or useful?

I really enjoyed learning about process control and the concept of Transport phenomena. Since transport phenomena is needed to explain the

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

ECE 210, Not sure how small circuits apply to chemical engineering in a industrial scale. Even while taking process control course.

(4.) What courses/topics should we consider deleting or adding to the curriculum?

Adding Aspen due to how heavily it is used in Senior classes. Or find a way to incorporate it in more classes.

(5.) Do you have any additional comments or suggestions?

If aspen is used in process and Senior Design, It would be best to make it mandatory or omitted. Due to the class being a elective.

SENIOR EXIT SURVEY

As a senior student, we would like you to complete this self-assessment survey and to provide feedback for improvement of our curriculum for the ongoing ABET accreditation of our chemical engineering program,. Thank you!

(1.) Based upon your experiences as a Chemical Engineering student at UIC, please rate your skills in the following categories, using the following criteria: (5 = Excellent, 4 = Strong, 3 = Moderate, 2 = Weak, 1 = Poor)

<u>4</u>	Ability to apply knowledge of mathematics, science and engineering.
<u>4</u>	Ability to design and conduct experiments, as well as to analyze and interpret data.
<u>4</u>	Ability to design a system, component, or process to meet desired needs.
<u>3</u>	Ability to function on multi-disciplinary teams.
<u>4</u>	Ability to identify, formulate, and solve engineering problems.
<u>4</u>	Understanding of professional and ethical responsibility.
<u>3</u>	Ability to communicate effectively.
<u>4</u>	Broad education necessary to understand the impact of engineering solutions in a global and societal context.
<u>4</u>	Recognition of the need for, and an ability to engage in life-long learning.
<u>4</u>	Knowledge of contemporary issues.
<u>3</u>	Ability to use the techniques, skills, and modern engineering tools necessary for engineering practice.
<u>3</u>	Overall, do you feel that your undergraduate degree prepared you for your career?

(2.) Which courses or topics were the most interesting or useful?

CHE 310, CHE 205, CHE 311

Flip over for Questions #3-#5

(3.) Which courses or topics were the least interesting or useful?

CHE 230, CHEM 342, ECE 210

(4.) What courses/topics should we consider deleting or adding to the curriculum?

Remove: CHE 230, CHEM 342, CHEM 234, ECE 210

Add: more coding courses

(5.) Do you have any additional comments or suggestions?

N/A
